ClaimFast Labelling Guide (one page)

Rules for labelling motor-insurance First Notice of Loss messages. Full version: *data/labelling_guide.md*. Dataset: 20 development + 60 test synthetic messages.

1. Fields

Field	Allowed values and format
claim_type	own_damage, third_party_liability, theft, total_loss, glass_only, not_a_claim
urgency	high, medium, low
policy_number, location	Text as written, or null
incident_date	YYYY-MM-DD only if the exact date is stated; relative dates (yesterday, today) = null
vehicle_reg_no	Uppercase, no spaces or hyphens, or null
estimated_amount_inr	Integer rupees, or null
injury_reported, police_report_filed	true = stated; false = clearly denied; null = not mentioned

2. Claim type

Type	Use when
own_damage	Only the policyholder's vehicle is damaged. Another vehicle or a hit-and-run driver does not by itself make it third-party liability.
third_party_liability	Another person's vehicle or property is damaged, or someone other than the policyholder is injured (including a passenger in the insured vehicle). Proven fault is not required. Do not infer harm that is not reported.
theft	Vehicle or a part is stolen. In an FNOL context a missing vehicle counts as suspected theft; do not infer that a police report was filed.
total_loss	Destroyed or damaged beyond repair. Takes priority over other types; record any injury in injury_reported.
glass_only	Damage limited to glass (windshield, windows, mirror glass).
not_a_claim	Question, policy request or other message that is not a claim.

3. Urgency

high: any injury is reported, or the vehicle is undrivable or unsafe. **medium**: a genuine loss with no injury and no unsafe or undrivable vehicle. **low**: minor or non-urgent matters, such as glass-only damage or a non-claim. Total loss alone is **not** high; do not infer that a vehicle is unsafe because it is beyond repair.

4. Missing and ambiguous information

Use **null** when a value is not stated or cannot be determined confidently. Never invent policy numbers, dates, locations, registrations or amounts. For **not_a_claim**, still extract a policy number or registration that the message states; keep incident_date and estimated_amount_inr null when no incident or estimate is reported. Extract a stated location only if it is relevant to the event described.

5. Special cases

Multiple incidents: label the incident tied to the claim; do not mix details across incidents. **Forwarded messages**: use the whole chain but do not treat quoted or unrelated mail as a new incident. **Hinglish and typos**: use the intended meaning when reasonably clear; do not guess when it is not. **Location convention**: gold labels may keep words such as 'near' or the venue type (for example 'near Wakad bridge').

6. Reviewed ambiguous records

Record	Decision	Reason
DEV009, TEST029, TEST047	theft, flagged ambiguous	Vehicle reported missing in an FNOL context; theft suspected, not confirmed.
TEST009	theft	Customer explicitly suspects theft.
TEST027, TEST041	own_damage (corrected)	Only the insured vehicle's damage is reported.
TEST046	third_party_liability	Insured vehicle and another party's vehicle are both damaged.

Independent check: a second reviewer labels 20 sampled messages blind using *data/independent_review_template.csv*; *scripts/compare_independent_review.py* reports agreement and disagreements.
